Интелигентният интегрален вот на Амперабг

The intelligent integral vote of Amperавg

Contents:

1. Why should there be a change?
2. Organization for conducting the vote.
3. Draft account of the money invested for the vote.
4. Quotes from experts on the status quo.
5. Business card. An example of training how to do in the US, which was something normal for there. Here it is !! ??????

https://m.facebook.com/watch/?v=834710444031176&_rdr
https://bntnews.bg/toaletno-kazanche-72095tag.html

The idea is for alternative voting with other ballots and counting the vote with other technical means compared to the status quo until April 4, 2021, without buying anything!

Prof. Konstantinov - April 11, 2021 on BNT-1 with Georgi Lyubenov

There is no machine vote in EUROPE! Only in the city of Brussels / 4 /

Electronic only in Estonia with a population less than Sofia - 1,325 million, 2019
With envelopes in a few countries, with an old democracy, where lying is accepted as personal self-punishment !!! ???

Only 27% voted with machines, and 9,360 pieces were bought for BGN 43 million.
Do not spare your words about the machine voting in Veliko Tarnovo.
Do not spare your words about the elections in the United States, where voting is by machine.
"Referendum, BNT-1,15.09.2020". Not a word was heard from the guests, professionals, not party members, in support of the decision to vote with machines. Look at him!
www.capital.bg ›2020/11 /13.The public procurement is worth BGN 43 million, three of the members of the commission voted against the decision.There was also a resignation.A matter of consciousness…

Mr. Tomov, 13.02.2020 at 4 pm in an interview under the program "HORIZON" The value of the machine is as it is, but then in the years of storage until the next elections, for new software and others, it becomes more expensive at least one more road and a half ” If we multiply 43,000,000 x 1.5 = BGN 64,500,000 they will be in lethargy. On HORIZON Mr. Datsov , a former finance minister said spending on the next election would fall by 43m !!! ??? Practice shows that electronic devices that are not used for a long time change their parameters and in practice it is not known how much they will work ?? If they were paid at least for interest, as our favorite parties did from the money given to them by us, then there would still be some profitability. https://trud.bg ›30-40 leva..for a vote .. Due to the pandemic, the parliamentary elections on April 4 turned out to be the most expensive so far in our country - they cost over 150 million levs

How much does it cost to print the ballots in parallel in order to be used in case of damage and power outage. million and more and with possibilities for manipulation, which is a fact! In the Intelligent Vote it will be BGN 46.00 for each section and the same for each counting center! The vote in the Intelligent Vote continues by candlelight. The voter is in contact with only two officials and is protected by COVID-19. Dead people cannot vote, nor can they record a purchased vote with GSM, nor use thread to find out where to put the cross. There is no possibility to use "cute ink" because there is nowhere to use it.Now it is outdoors in front of everyone, not hidden in a cabin without ventilation and to breathe the air of the front, which may be infected
And when registering the vote, only two officials touch the ballots in a counting center i. according to the folklore for the scam when counting, deleting according to the protocols. The protocols are printed on printers, without writing , wiping, copying, tossing sacks and with a reduced risk of infection from covid-19.

This is also the "worst", the citizens tell me in the polls !!
Then why do you praise him?

From the "Institute for Development of the Public Environment" there was a press conference in BTA with Ms. Iva Lazarova, for the so-called risk sections, where the results were always the same in all elections. And this will be eliminated with the counting centers. Bad .. Very bad … The new MPs must immediately announce the machines for sale and get rid of Republic of Bulgaria from this sword of Damocles, which will constantly hang over us!

The most important thing is to write smarter about machine and electronic voting from 444 million in the European Union !! / 4 /

Candidates to think about improving our lives!
We will have provided theirs for 4 years in max!

The ballot paper is the size of two envelopes, made of A5 paper, which is half of a plain white sheet, A4 format. Quote: "The smallest regions (Vidin, Gabrovo, Yambol, Targovishte, Razgrad, Silistra, Pernik, Kyustendil) give only 4 seats. Therefore, the circles for preferences will be only 8. The largest region is 23 MIR - Sofia which gives 16 seats. In it, the parties can enter up to 32 candidates in the lists, and there will be 32 rounds in the ballot. The new bulletin, Fig. 1, does not have an identity check number, nor are there any parties and coalitions in extremely small print that most people can only see with glasses. They are on a separate poster, Fig. 2, the size of a newspaper. to be seen well. There is a drum, fig.3 with glued numbers from "0", 1,2,3,4,5,6,7,8 to 9 on separate rolls. The right one has clean stickers. Lines 3,5 are perforated. Field 2 contains the preference numbers.

fig. 1

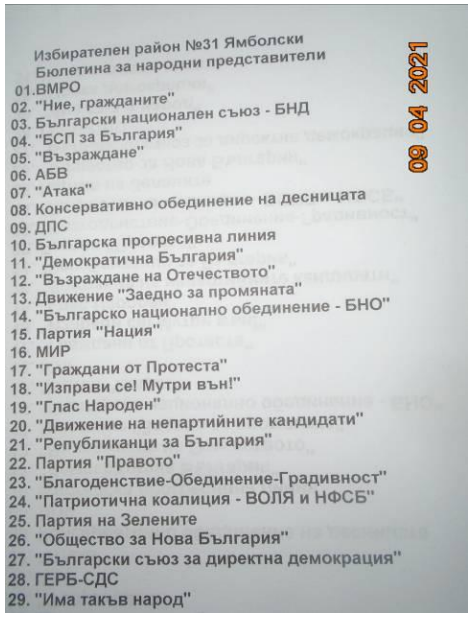

fig. 2

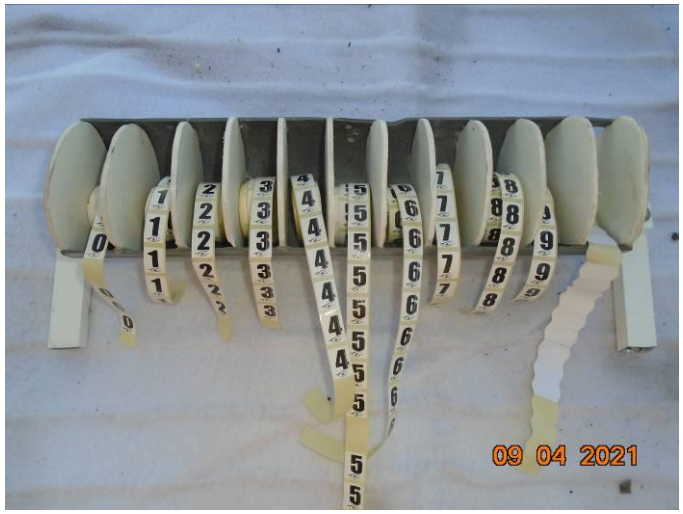

fig. 3

Prototype!

Seals are not used. Elementary as graphics, but super-intelligent to remind that the vote is a matter of personal morality, responsibility and not to be humiliated in front of anyone, especially in front of his employer, in front of servants who mitarka, as uninvited suitors, for to bribe you with a lev and humiliate you as a HUMAN! If each of you had asked them for BGN 500 per vote, they would have closed their tails. Do not trust these chameleons who constantly change their parties and agitate for the one who promised money. You can no longer record the vote with the GSM and show. This madness to throw money in the waste, even if they are not personal, in the next vote if it does not disappear, it will decrease as a practice. So we will choose the honest, talented, who will think about a better life for your family, loved ones you, your friends. This is a useful move!

Do not humiliate yourself as homo sapiens! Make personal intelligent choices!

The training of the commissions will be remote with videos. He has experience with pupils, students. And also in clubs, town halls. From the conducted surveys and with illiterate, uneducated immediately feel where the wind blows and "still in the air" catch the idea. Who are the phone scammers? They tell me to give up, although they support me, but they are also convinced that the deputies will not accept it.

Organization of the Intelligent Vote - Fig. 4

Panta rhei, panta chorei ", wrote Heraclitus more than two thousand five hundred years ago and to this day remains right -" Everything flows, everything changes. "

There is the European Union, other countries and I believe in success!

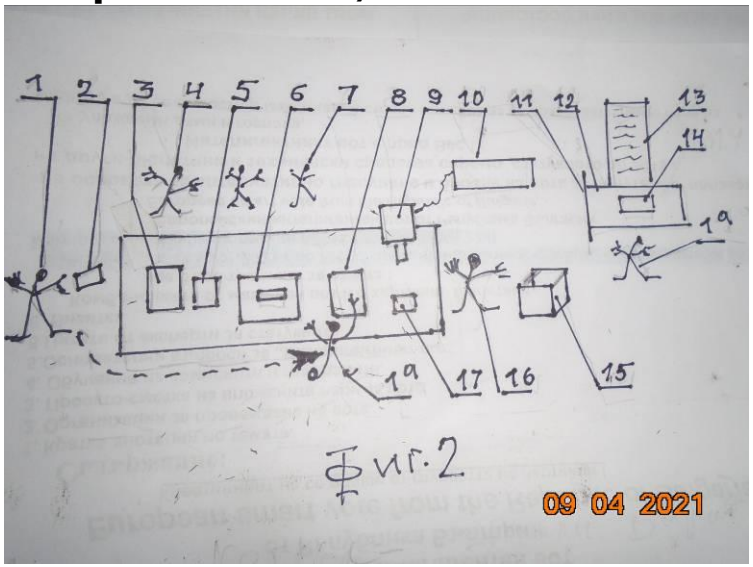

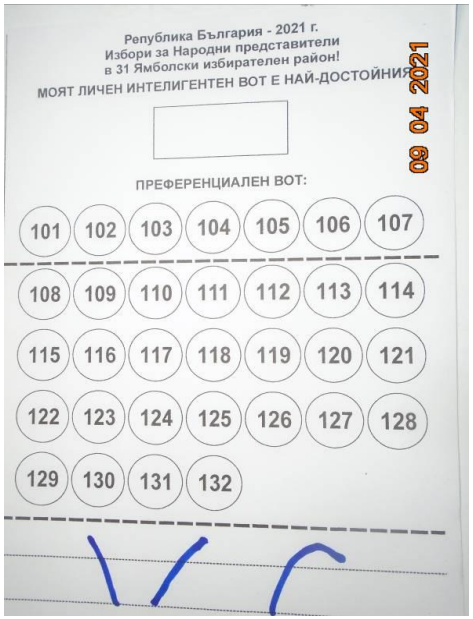

Fig.4

An official at the entrance of the hall hands the voter 1 mask and surgical gloves, if there is still a pandemic, and as before he presents his ID card 2 to the official 4, standing behind the table, who, as before, checks in the list 3 that has the right to vote and puts it in place 5. Behind the table are the other members 7 of the commission with masks at the regulated distance. In the hall are also citizens, observers, advocates. From the pile 8 the voter 1a, takes the ballot himself and puts it in the place 17 under the camera 9 of the laptop 10, raised high so that the monitor can be seen by everyone. There everyone can see the ballot from fig.1. images between lines 4,6 and this is seen at the moment by all of the monitor 10 and it takes the form of Fig.5

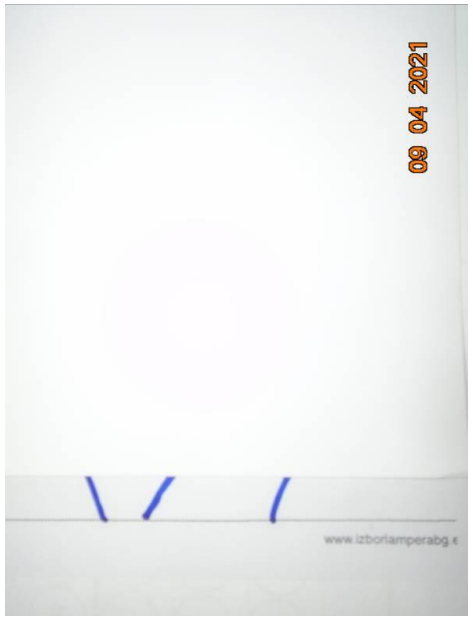

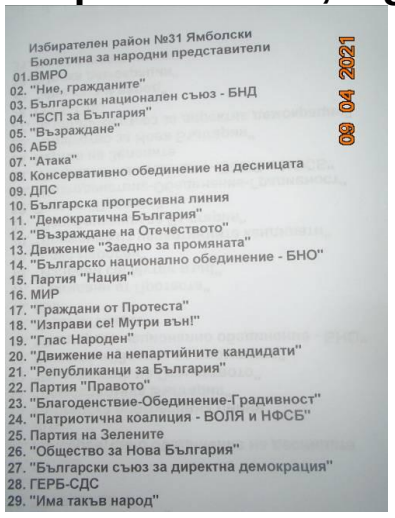

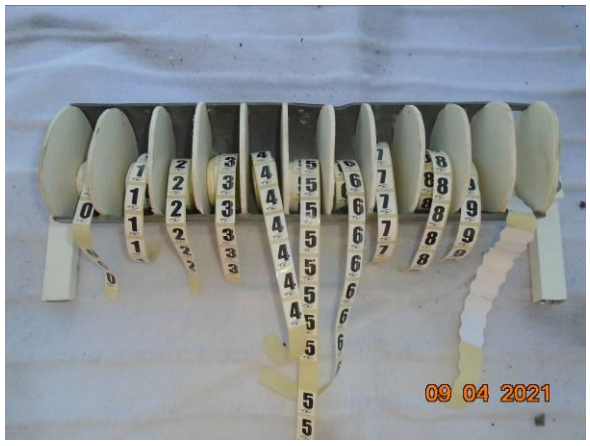

Fig.5 **Fig.6** **Fig.7**

The official tears the ballot paper along the perforated line 5, leaving the lower control part under the camera, in the form of Fig. 6, and hands the upper one to the voter in the form of Fig. 7, who goes with the ballot paper to the open table 12, Fig. 4.

Prototype!

Fig.8 **Fig.9** **Fig.4**

In front of him is the poster, Fig. 2, with the parties, the coalitions, which are marked with numbers starting from 01.02.03 to 31 for this election. The number I do not approve of anyone will have to be last. The voter can be seen in his full height by everyone, but from the barrier 11, it is not possible to see what vote he will make. In front of him is the drum 14, fig.3. He has chosen, for example, a party, coalition 02. He peels off the numbers and sticks them at the top in box 1. If he is wrong, he peels off new numbers and sticks them on the previous ones. Absolute freedom of vote. He can choose a criminal vote, leaving it clean , to indiscriminately paste as many numbers as he wants, but he can't write nonsense, scratch it, or tear it, or record the vote with GSM, or take malicious action, because it can be seen in full length, but it will be counted, that he voted. You can be select only one preference by placing a cross on the number, but without more room for correction, cross out another number because the preferences become invalid. In this case, he has chosen preference 105 and the bulletin takes the form of Fig.8

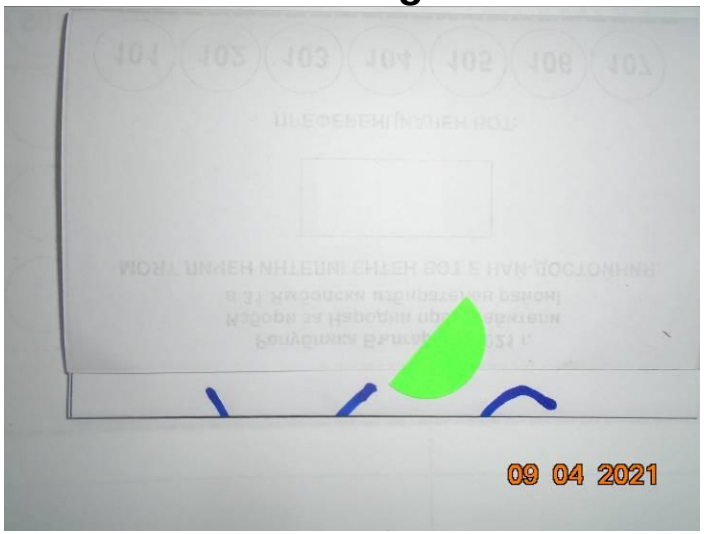

Fig.9

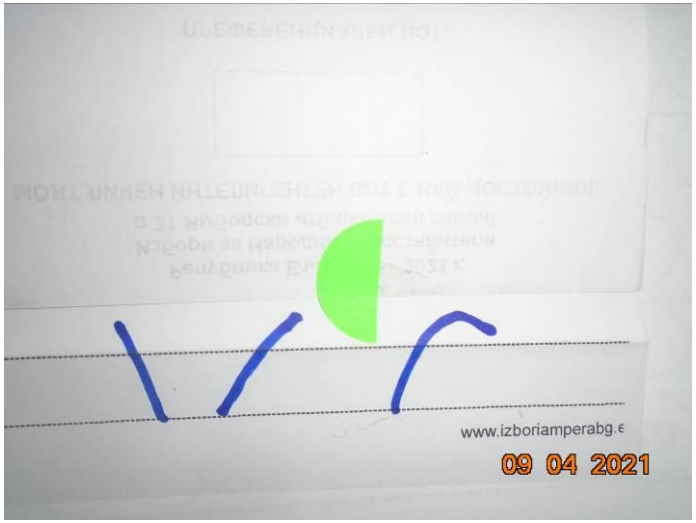

Fig.10

Now the voter folds the ballot paper along the perforated line 3, fig. 1 and it will touch the line 4. Peels off the stickers from the last roll on the right and sticks them on the ballot paper so that the vote cannot be opened and seen and it looks like fig. 9. Serves it at work

person 16. It puts it under the lens of the camera 9, bringing it closer to the left control section fig.6, and everyone on the laptop 10 is convinced that this is the ballot given to him - fig.10.No stamps, numbers for comparison. The official submits the checked ballot to the voter to put it in the ballot box 6 with ballots and goes to sign that he has voted and takes his ID card. What will be done with the control segment with the form of -fig.6? The official puts it in box 15 for waste because no one needs it anymore. So far, absolute visual control of the voter's actions and the identity of the ballot, and so on until the last voter.

How will the vote be checked? Here is the other key!
The verification of the vote for each ballot and the recording of the result is on three laptops within seconds !!!!!! ???.

It is a question of a specific organization with the creation of the counting centers, which is an old idea, but obviously the parties do not support them. Do you remember why? the number of votes from the ballots.It is not worth.If in a school there are for example 6 sections.After the vote bring the ballot boxes and pour them on the table 4 in a pile 5- Fig.11.It is unlikely the chairmen 1 and the other members of the sections They will know each other. And to know how they can manipulate the vote. There is no way. It will be broadcast for free on Facebook, not on the Internet and the people from their homes will monitor the inspection by phone. Here the hackers do not have the word. It is technically taken away from them!

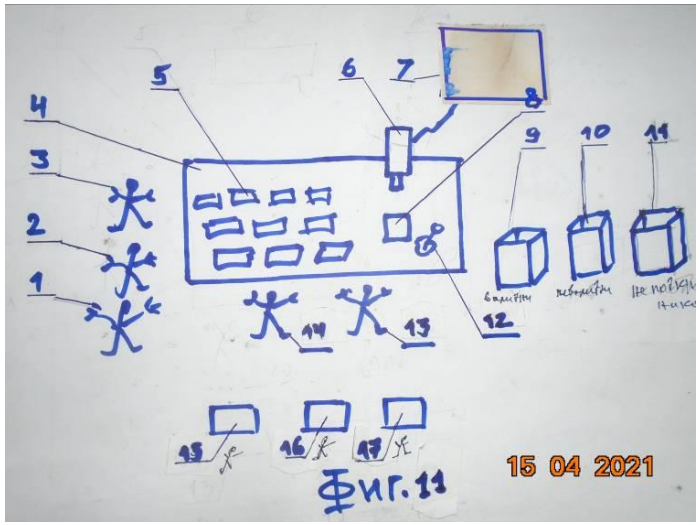

Fig.11

For greater expediency, one official 13 opens the ballots from the pile 5, hands them to the other 12, which shows it to everyone, reads the vote aloud on the microphone 11-02108 Puts it in place 8 under the camera lens 6 and votes is visible on the laptop 7 of all. If there is no other opinion from the presidents 1 that these are the numbers, he puts it in the box 9, for regular. At that time, each operator of the three laptops 14,15,16 each writes for himself 02108 and gives an enter.

The second bulletin shows: 03123. It is informed and recorded using the same technology. On the third bulletin he sees: 10105 and by the same technology he is informed and recorded. The fourth ballot paper is seen to be clean, there are no marks and the official 11 puts it in the box 10 with invalid, but then it is counted that it was voted. The operators do not record anything. Only at the end only the invalid ballots are counted manually. there will be few, because there can be no confusion and there are many invalid ballots.

Fifth .. Indiscriminately pasted numbers - to the box 10. Invalid in the box 10 and then will be counted as voted. Sixth. There is a figure of 30 per party, but no preferences. Regular and placed in box 9., a

operators record 30,000 Seventh..Applied party, coalition with a number of about 33, and they are 32 in the poster. Irregular and put in the box 10. Eighth. The party, the coalition correctly marked with 25, and the preference is with two crossed out numbers - 109 and 111. The ballot is regular and the preference is wrong. Operators recorded 25,000 The ninth ballot. The number 32 is printed - I do not support anyone. Regular and the operators write: 32000 and put in the box 9.
Tenth bulletin .. Several numbers are entered 8 6 1 Invalid and in the trash 10. There will be other marks, which will be regulated by law. I show the idea. And so to the last ... Here is the easiest, which was the most difficult in the status quo! Each operator gives a check command for himself and in seconds the software arranges the result with their preferences. As in competitions, in Eurovision for songs and performers. As in the lottery. what is the amount, etc. There was a misconception of the previous deputies that the long ballots of 60 cm can be counted automatically with machines. Quote from "Trud" 17.02.2020: "They call the lottery for wisdom under the Electoral Code at the request of Mrs. Anna Alexandrova, Chair of the Legal Committee in Parliament" See the result. Actually from 18.02.2020 Program "Horizon" 07.41 on the occasion of yesterday's meeting with specialists from TOTOTO.

"A machine check cannot be carried out because the ballots are long. Such a machine is very expensive !!! "

So a long time ago I was given a positive answer for the Intelligent Vote, which I constantly improved and I offer it to you in a complete form. There is also a history / 6 / The results of the Smart Vote cannot be other than the same. None of the operators can cheat. The invalid ballots will be counted manually and the option separately - I do not approve anyone and will be added to the protocol for information. Once everyone agrees with the results, then the ballots are poured into a bag and handed over to secondary

raw materials, because no one needs them anymore and they do not pollute the environment. The printer prints the results in the form of a protocol. The chairmen of the sections sign that they agree with the vote and write down the data on a flash drive and take a protocol. The chairmen with the book protocol go to the District Election Commission and with a flash drive transmit the results in electronic form. They are entered in front of them in the electronic register and become publicly available for further inspection by the chairmen, by citizens. There is no way to make changes, because everything is known how it was and the parties have it.

The status quo will be in history!

They canceled the video because it's really stupid to do it with the status quo. They heard with protocols, trucks, the Ministry of Interior, waiting, starvation, fainting in front of Arena Armeec and the other place for receiving the protocols. Miracle! Miracle! Now all this is gone ... And it's money ... Isn't it? In the next elections, citizens at home on Facebook and those in the hall with their laptops will watch the vote without crowding in front of the hall and will get the same results, because the program will be copied for free by anyone who wants and no one can change the vote. NOBODY, because there is no internet connection !! Election day is over. The numbers

they were in the same field, the official read them aloud, they were clearly visible to everyone on the monitor, and there was no doubt that these were the numbers. They were not on a "long scarf" of 60 cm. In the status quo, the illiterate look for the marks with a string on which square to put a cross. There can be no "Dexterous hands" to put another cross on another party to make the ballot invalid if not voted on his. And that eliminates many other negatives…

Second option for cities:

The ballots of sections from other buildings will be checked as well, several counting centers will be built and the check will be made according to the same methodology. Each newsletter in a few seconds!

Third option for town halls, municipalities:

The boxes are carried to several counting centers of the municipality or to a larger town hall and are checked according to the same methodology. Every second !!!!

Everything is transparent and clear about the vote! The reporting is done on three laptops from different parties of their operators and from the citizens, who will receive the program for free. To put it intelligently - no gap for manipulation, and popularly - for lying.

This methodology has not satisfied the parties so far, although everyone is familiar more than 2 years ago! I have no answer. Maybe you have ???

Then why do you praise me - they tell me in the polls?

Citizens will certainly support it. There is an opportunity to automate the vote report, in a national global form. A matter of choice with software development. Our programmers are leading in the EU. The results by sections, municipalities have them in electronic form.

NO MORE carrying bags of protocols, replacement, fainting….

The status quo in history, because it works with an electronic signature and other protections that are impenetrable on the Internet. This is how you pay for a vignette, taxes, civil, blue zone. sixes, fives and value. It just takes willpower to save our money.

For each section the costs of technical means at prices in stores:

1Laptop without special extras …… 450.00 / 1 /
2. Camera with USB cable …… 030.00 / 2 /
3. Chemicals …… .010.00 / 3 /
4. A5 package with 500 sheets costs …… 006.00 / 4 /

Total: BGN 046.00 !!! ???? Ha! ???

For each counting center the costs for the technical means at prices in shops:

1. Laptop without special extras …… 450.00 / 1 /
2. Camera with USB cable …… 030.00 / 2 /
3. Printer for black printing …… .150.00 / 3 /
4 Chemicals 010.00 / 4 /
5. A5 package with 500 sheets costs … 006.00 / 5 /

Total: BGN 046.00 !!! ???? Ha! ???

Because there are millions of laptops in schools, universities, municipalities, town halls, community centers. Also printers. Why buy? Only the program will be kept and updated for the next elections after a public procurement by the CEC-Central Election Commission. the cameras that will be bought, because they are not everywhere. And they usually cost BGN 30 with good quality.

The CEC will organize a public procurement for the software. The finished product will be handed over to the commissions and to the citizens free of charge, because there will be no internet connection and no cyber attacks.

It only takes will from the parties for change !!

I sincerely hope that the project will receive support from all MPs, from you citizens, to choose the most worthy in all areas of life, without spending millions of our money, and not on the parties that we have given them.

I invite the CEC, together with the parties in the National Assembly, to organize an experimentally parallel Intelligent Vote, the one of the status quo in other types of elections. And, as I look at your site, there are almost every week. payment of advocates, commissions. We will make the report on elementary protocols, which a student can fill in. I make an analogy of how we reported the buckets of tomatoes to the students in the autumn brigades for a while in the villages. Again for a second. If no software has been prepared yet. And this will happen if the CEC announces a public procurement.

I will also invite Diana-kabel-tv-Yambol for the event, because I was not ready to share the project in front of them, although I had an invitation. Everything with its time… .

This will make sure that the project will work successfully!

16.04.2021

Drazhevo,region Yambol

0359 878 72 45 80 **Sincerely yours, Georgi Dimitrov-Amperab**

Excerpts from interviews:

/ 4 / "France allows machine voting in limited cases, mainly abroad. Intelligence services have recommended that electronic voting not be used in the 2017 elections due to the cyber threat" "Countries where machine voting and online voting have never been used , are Austria, Greece, Denmark, Ireland, Spain, Italy, Cyprus, Latvia, Lithuania, Luxembourg, Malta, Great Britain, Poland, Portugal, Romania, Slovakia, Slovenia, Hungary, Croatia, the Czech Republic, Sweden and Iceland. "" In Germany , The Netherlands, Finland and Norway, machine or other electronic voting has been used but removed due to security concerns. " "Asked which is the best technology for voting in our country, Prof. Konstantinov said that the technology used in Bulgaria is the same as in all of Europe.

Europe is nowhere to be found, but remote, electronic or internet voting in one or two countries. In some European countries, voting is also done by mail, which is their tradition for more than 100 years. "

/ 3 / The introduction of remote electronic voting or internet voting would make it easier for Bulgarians abroad and this is one of the proposals - to be able to vote only in this way. However, this vote raises the question of the secrecy of the vote, which can be guaranteed, he said. the so-called electronic voting until the moment when the electronic register of voters is prepared. So far we do not have such a register and this would make electronic voting very difficult, Prof. Konstantinov is categorical.

See preparation. Type in Google: "Electronic voting"

You will see the law and many more interesting comment

Particularly interesting quote:

Applications for the three electronic services must be submitted no later than 14 days before election day. You must note that in order to request the service electronically, you must have a Qualified Electronic Signature Certificate (QUEP) or Qualified Electronic Signature (QES) installed on your computer, an account in the "Electronic Service" system and installed on the Adobe computer. Reader. There is no charge for the services. The completed and signed electronic form of the application is sent through the System for secure electronic service to the selected municipal administration. The provision of these services can be performed by all municipal administrations that are connected to the specified system, without any other requirements for them… ”

How many people can do this and why?

It is indicative of where we have gone and that is wrong!

/ 5 / Educational element. After all, I am a Teacher with 40 years of continuous experience!

History of the "Intelligent Integral Vote of Amperabg"

My whole concept also has a history of voting, but in any case - necessarily with numbers. But how? I tried with a special typewriter… It doesn't work..With applying the numbers with stamps - inconvenient ... And the easiest with writing the numbers by hand. But my friend Elijah, an information technology engineer, suggested that there could be a contest of the vote in court and to make deliberate markings for a purchased corporate vote. Another friend Lachezar, an engineer who maintains my equipment, offered to use it

samples for applying the codes for the settlements, as well as on the envelopes. We tried .. It is still possible to register a purchased vote. My next idea was to use a console for applying the vote. The ballot paper is placed in the hole of a mini-printer, as there is from the console in Fig. money from an ATM. And this will be thousands of times simpler than, for example, paying for a ticket for parking a car in the Blue Zone.

What if the printer is damaged, the console. I was thinking about discarded cash registers. Same thing ... Like the status quo? And OUR money will be invested, not that of the party members to whom we have given it. Should I continue with the previous decisions? As I shared - they are not acceptable..Then ??? !!!! Miracle! Language for my work! But I know from experience that there is always a solution to technical problems. And the inventive step appeared in my mind. By peeling off ready-made numbers for voting. Simple, cheap, safe. But how about an album with sheets of numbers? It doesn't work..Well now? And the decision emerges…. Thanks to Vasco from „Diagal", who made me the rollers with the numbers… What if they are on rollers on axles, how will they be replaced .. ??? All problems… Not free in restrictive channels and will be displayed through a slot. The drum that was in the description is a prototype and will be at a very low price, because it will be injected and will be used for all types of elections…

It is very easy to say that something is very simple ……
There is no untold success!
Success goes with the brave and uncompromising to any status quo that does not meet the public interest. You support them! They will not let you down!

Amperabg

You have to act. And you have to be ready to fail.
If you are afraid of failure, you will not get far Steve Jobs

www.amperabg.eu

Thanks to my friend: a.hristov88@gmail.com, whom we met at training. He prepares and uploads all the materials for me and the other sites.
